LVS™ LIVE VIDEO STREAMING™

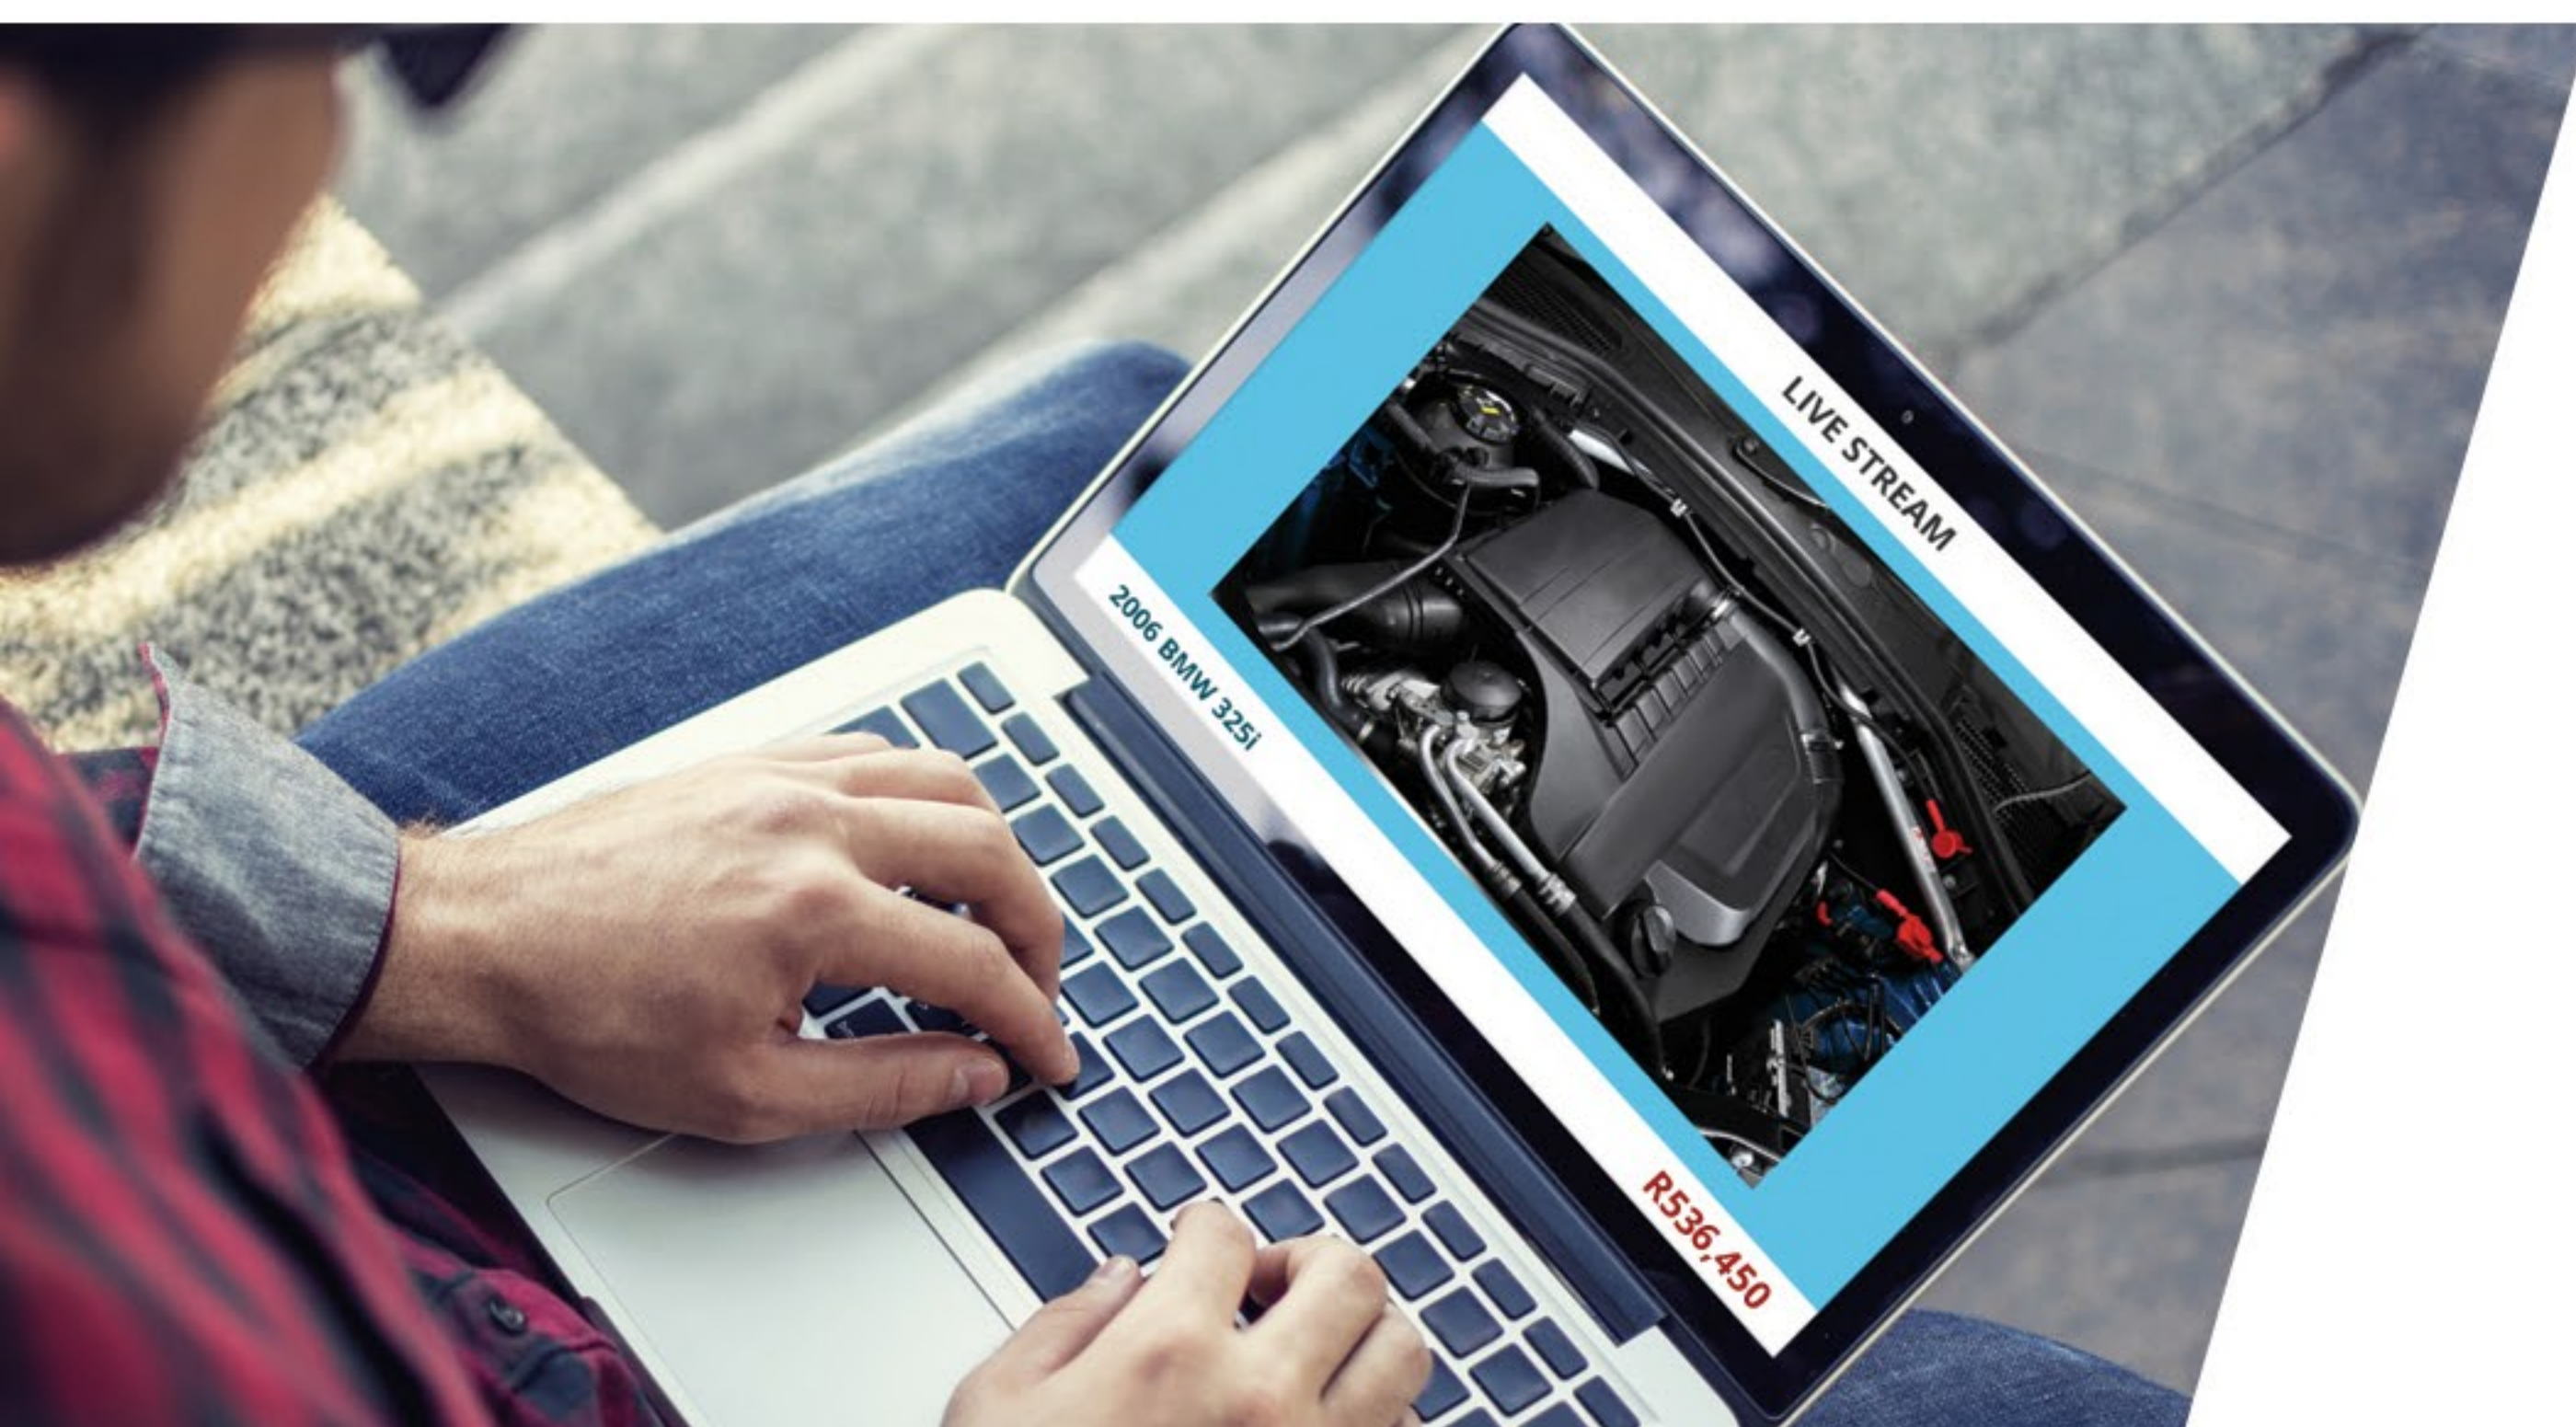

The Live Video Streaming™ application allows the sales person to show a potential customer any vehicle they have in stock in real time just as if the person was at the dealership himself. Since the video only streams one way (dealership to consumer) the customer can take a video tour without any privacy concerns.

Live Video Streaming™ (LVS™) by Autoxloo is coming to car and commercial truck dealers all across the world. The LVS™ is the next lead generation/conversion evolutionary step past “live chat” and has become extremely popular with both Gen X and Y car buyers who are just too busy to waste time traveling from dealer to dealer.

REDEFINING SALES AND SERVICE

- BETTER CONSUMER ENGAGEMENT THAN LIVE CHAT
- INCREASE PARTS AND SERVICES REVENUES
- CONVERT MORE SHOPPERS INTO BUYERS

The way it works is very simple. The customer selects a vehicle he likes then fills out a “request for live video tour” web form. An email is then generated automatically which contains a link to join the live video tour. Since the Autoxloo LVS™ consumer facing side is browser based the client does not have to run or install any software to view the presentation.

Service managers are also leveraging this new technology to increase their sales and customer loyalty. Now when customers bring their car in for service the tech has the ability to show the customer any other recommended maintenance or repairs that are needed all in real time. It's a win-win for everyone; the dealership gains the trust of the customer by being 100% transparent while the customer gets the convenience of being able to make an important decision without the hassle of driving to the dealership and waiting to speak with the service manager (which will more than likely end in the client refusing any “optional” service or repairs).

The LVS™ is fully integrated into the Autoxloo dealer marketing solution and will also be offered as a stand-alone product that can be easily added to any existing website platform. To view more information or to schedule a “live” demonstration simply contact us now!

LVS™

CONVERT SHOPPERS INTO BUYERS

The LVS™ (LIVE VIDEO STREAMING™) application is the next evolution in lead conversion for both automotive dealers and commercial truck dealers. The Autoxloo LVS™ enables the sales person to provide a live video tour of any vehicle at their dealership.

Our dealers are also using the live video streaming app to increase their service absorption rates by showing customers first-hand any additional repairs that have been discovered during a visit to the service department, saving the need for the customer to make additional trips to the dealership.

AUTOXLOO'S CONCIERGE SERVICE

Every dealer wants to provide superior customer service. It's often the driving force which sets you apart from the competition. The management of the dealership involves three main parts: people, process and technology. Autoxloo will help you to piece all parts together seamlessly.

Autoxloo's "Concierge Service" is for dealers that want to utilize personnel that are already experts in the system and avoid the time and expense of hiring and training an entry level person that does not have the skill set necessary to succeed at the position.

Autoxloo developed Power Concierge Service to give dealership first class service that will allow them to spend more time focusing on their core business. MANAGED SEO GET THE COMPETITIVE EDGE

Over time a strong SEO program is shown to improve brand awareness, dealer reputation, service absorption rates and most importantly increase not only the total amount of leads, but the quality of the leads themselves. In this article we will be discussing four avenues that an average car dealer can use to improve their websites' SEO and online presence.

01. ORIGINAL CONTENT

You will need to develop a real strategy based on your target audience, insights and behavioral statistics. Some good examples of original content include car reviews, testimonials, automotive maintenance tips and a daily, weekly or monthly contest that requires the consumer to visit the website daily to participate.

02. WEBSITE INFRASTRUCTURE

Autoxloo offers the most SEO compliant platform on the market today: extensive analysis of website analytics to identify problems with keyword management/density, meta information, navigation, URL structure, H1 tags, page flow, referrals, landing page configuration and content management.

03. LINK RELATIONSHIPS

Standard operating procedure for any car dealer is to make sure their business information is live and up to date on all of the local directories such as CitySearch, Yelp, Yahoo local, Google Maps, Google Plus and more. More advanced strategies should include producing high quality articles for distribution.

04. SOCIAL MEDIA

The goal for any social marketing program is for your message to go viral and as a result the cost of acquiring a new customer reduced across multiple lead conversion platforms. Twitter, Facebook, YouTube and Pinterest are used to gain online visibility.

DOES YOUR WEBSITE PERFORM WELL?

Surely you have noticed that some websites load very quickly while others keep you waiting until a webpage shows fully.

The page load speed is an important parameter which influences the website usability, user-friendliness, performance and SEO promotion. For example, Google prefers to raise “light” websites in its search results since it helps users get the required information within a very short time. Website speed affects such behavioral factors as the bounce rate and visit depth. The faster a website loads, the better these performance specifications will be.

The average website loading time should not exceed 4 seconds. The best load speed is up to 2 seconds because this is the approximate time a patient user will wait until the information appears on the screen. 57% of visitors leave the page which loads more than 3 seconds. A progress bar can extend the expectation time up to 38 seconds. Thus, the website performance plays an essential role for the traffic volume and should be monitored and studied in detail.

01 UNACCEPTABLE PARAMETERS

02 REQUIRES SOME IMPROVEMENTS

03 GOOD PARAMETERS

AUTOXLOO VS OTHER DEALER WEBSITES

Google and Pingdom distribute all websites according to different characteristics into special zones marked with 3 colors. Green color identifies the sites with the acceptable parameters in most categories. Yellow zone means that your website is good but requires some improvements in the load time, performance or speed. Red area is the place to ring alarm bells because your website specifications are unacceptable.
